

Nantong report

Share opportunities and build the future together with Nantong

Wu Xinming met president of TOWA Co., Ltd. HIROKAZU OKADA and his party by video conference

By Li Tong

On the morning of 19 December 2022, mayor of Nantong Wu Xinming met HIROKAZU OKADA, president of TOWA Co., Ltd. and his party by video conference. Both parties carried out in depth conversation about further improvement of cooperation.

Wu Xinming expressed gratitude to TOWA Co., Ltd. for choosing Nantong and investment in Nantong representing CPC Nantong Committee and Nantong government. Wu Xinming hoped that TOWA could grab the strategic opportunities of Nantong's development, make full use of leading advantages of the industry, arrange more excellent projects, share opportunities and build the future together with Nantong. Nantong will focus strength, gather policies and resources to provide all round services for enterprises' development.

HIROKAZU OKADA expressed gratitude to CPC Nantong Committee and Nantong government for care and

support for the company's development in Nantong. He said that since the start of construction of TOWA semiconductor equipment (Nantong) project in April 2020, it has progressed fast, and was completed and in operation within a year, which increased the confidence of TOWA to deep plough in Nantong.

TOWA semiconductor equipment (Nantong) project was invested and founded by world semiconductor packaging equipment and mold manufacture leading enterprise TOWA Co., Ltd. The total investment is 80 million U.S. dollars. The registered capital is 30 million U.S. dollars. TOWA semiconductor equipment (Nantong) project, as the largest investment project of TOWA group in Nantong, not only manufactures semiconductor packaging equipment and semiconductor ultra precision mold which represent the most advanced technology of TOWA, but also brought in the most advanced technology and equipment from Japan, which filled the gap of mold high quality plating which is difficult to be realized in China.

Spoke for environmental protection in China
Haimen student went to the United Nations

By Huang Tianling

At 3 pm 16 December 2022, World Green Summit which lasted 3 days was closed at United Nations Conference Center in Bangkok, Thailand. At the closing ceremony of the summit, Zhang Qinying, student from Haimen, shared her feelings during the summit, urged young people to pay attention to ecological civilization building, and participate in environmental protection practice actively in their best abilities.

At the summit, there were 160 youth representatives

from more than 30 countries in the world, including 16 Chinese representatives. Apart from overseas Chinese and students from Hong Kong, Zhang Qinying was one of the 9 representatives from mainland China. She was also the only participating representative from Jiangsu province.

Zhang Qinying is from Haimen. She is a year 4 finance student in Nanjing Audit University. During the summit, she not only showed the world the green practice in China, but also talked about her own idea, shared the opinions of Chinese youth on coping with climate change.

The first 3000 ton self lifting self propelled wind power installation ship in the world

N999 delivered and set sail

By Xu Congjun

On 20 December 2022, N966 self lifting wind power installation ship made by Qidong COSCO shipping and marine engineering for Belgium was delivered and set sail. It would go to the largest offshore wind farm in the

world in North Sea, England, Dogger Bank for service.

N999 project is the first 3000 ton self lifting self propelled wind power installation ship in the world contracted by Qidong COSCO shipping and marine engineering as the EPC main contractor. The ship has super

lifting ability. The lifting capacity of the main crane is over 3200 tons, which is the maximum in history of this type of ship. The maximum lifting height reached 325 m. The maximum working water depth is over 80 m. The effective loading capacity is over 16000 tons. The ship

will realize ultra low emission. It is the first ship in this type which reached Europe 5 emission standard. After it is delivered, it not only can install the wind turbines and bases of the new generation of wind turbine, but also can be used in oil and natural gas industry, and demolition of offshore structure.
